

Shiloh 4.0 System Administrator

Shiloh Technologies will train and assist the customer's designated System Administrator(s) in the set up and maintenance of Shiloh. The System Administrator role is a key component to Shiloh's success. Crucial responsibilities of the role will be discussed and students will work through practical exercises. Monitoring data loading is one of the most important functions an Administrator performs as it is critical to all users.

Class length: 6 hours

Who should attend: Designated Shiloh Administrator for your company
